For Immediate Release

KMT Waterjet Systems Celebrates 5 Year Safety Record

On February 1, 2005, KMT Waterjet Systems celebrated five years without any lost time accidents. In a manufacturing facility, 1,322,283 working hours without lost time is quite amazing. On top of reaching this milestone with a high number of working hours, sales have been increasing at double digit rates. An active safety committee, regular safety meetings, monthly safety department inspections, positive employee involvement, and proactive management support have all proven to be key ingredients to the successful safety program.

Safety is a top priority in the eyes of all the employees. Positive attitudes and safety awareness are also directly related to the five year success, and as a result, the company is planning a steak dinner for all employees to attend. Celebration programs for successful safety achievements create a positive environment where safety is a top priority.

KMT Waterjet delivers ultra-high pressure waterjet systems which have greater reliability and ease of use at pressures up to 60,000 psi. The company is focused on *designed precision for waterjet cutting*.

KMT Waterjet is part of the KMT Group which markets, develops and manufactures advanced production solutions for the engineering industry within precision grinding, sheet metal working, tube forming, and waterjet cutting. The KMT holding company, Karolin Machine Tool AB, is quoted on the O list of the Stockholm Stock Exchange.
